

Everyone -

We have scheduled a MMADC team teleconference for this Friday afternoon from 3-4:30pm. Because of the travel and meeting schedules of several members of the team at Aptima and NCSU, this is basically the only day and time at which we can do this meeting before the end of this month. I also think we need to get going on the Year 3 project.

As a brief agenda, I propose we discuss the following items:

- 1 - MMADC Y3 objectives - validation of clutter measure and models in alternate domain/task using comparable display technology.
- 2 - Operations philosophy for research project - helo. operations, lunar landing, V/STOL. Need to achieve objective of "dual-use" of results.
- 3 - Flight scenario development for experiment - stages of approach/landing, relevant displays. Type of expertise needed on team for experiment planning.
- 4 - Current Vistas simulator configuration for Altair display research. Simulation development needs for MMADC Y3
- 5 - General discussion of experiment - stimuli, subjects, IVs, DVs, training, testing, analyses.

Please send me any additional agenda items that you may have.

Thanks and talk with you on Friday.

Dave K.
