Figure S1. UV-Vis spectra of ITO on polystyrene (1.6 µm)/glass and glass substrates with different ITO thicknesses, as well as commercial ITO (280 nm) on glass substrate purchased from Thin Film Devices Inc.

Figure S2. a) Buckled wavelength as a function of ITO thickness on a 1.6 µm PS substrate; and b) Buckled wavelength as a function of PS thickness with 40 nm and 200 nm top ITO films, respectively. The lines in both plots are meant to guide the eye.
